Configuration
(Components,
sub-components &
Maintenance
activities)

Maintenance Plan

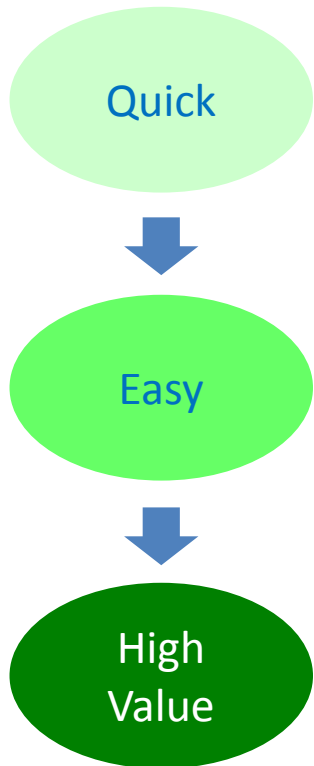

- Image gallery for boat
 - Premium users can also upload images per component
- Overall profile of boat
 - Overview includes make, type, length, year etc
 - Characteristics include IJPE, engines, water capacity etc
- Upload key boat documents
 - Tonnage, CE / ISO Compliance, VAT, Registry, Technical
- The configuration of the boat as “components”
 - Identify the components and record state of repair
 - Upload images to show current state or configuration (premium)
 - Add sub-components where relevant eg impellor – engine
 - Add maintenance activities to individual components
 - “Service book” can be used to add general maintenance activities and record important servicing information
- Maintenance Plan = Collection of all maintenance tasks
 - These are collected from all components and the service book
 - Can be displayed in various orders (time, priority, status etc)

Each element can be displayed (+) or hidden (-) using left hand menu

Configuration: speed vs quality

Configure a boat in the following ways:

- No configuration!
 - Add maintenance tasks directly to the service book to make a plan!
- “*Find sister ship*” and copy the list of components
 - Fastest way to copy over a default profile (if a similar boat already set up)
- “*Configuration Wizard*” for your type of boat
 - Basic lists of most common components per boat type
- Manually add components to match the boat specification
 - Reflect the specifics via choice of components (and sub-components)
- Compare against preset profiles for racing or offshore cruising
 - Refine and expand an existing profile using any of the advanced test profiles
- Partner and Premium users only:
 - Copy an existing boat profile and change as needed
 - Create your own customised reference boat or test profiles

Update your configuration over time

- Start by using a wizard or a sister ship
 - If no other boat of your type exists then compare against WISH to add components
- Compare against different profiles until you are satisfied that profile is “complete”
 - Minimum recommended level is to complete a configuration wizard
 - You can re-use and test against as many profiles as you like, in any order
- The configuration can be expanded over time
 - Test the boat against annual checks, safety profiles etc – check compliance to race regulations
 - Each update is saved in the database
- Maintenance plan
 - Add major activities to the service book e.g. Haul out, major repair or repaint etc
 - Add other activities to the component that they impact
 - The maintenance plan collects all activities and displays these in different orders
 - You receive a reminder when a maintenance activity is due

Confidentiality of boat data

- Only when “Public Profile” enabled:
 - Boat overview and images visible to all registered users and externally (visitors to website)
 - Search via “Find a boat” at bottom of screen
- “Sister ship”
 - List of components per boat type/year visible only to other registered owners with same boat type
 - Details hidden (description, status, dates etc)!
 - Enables fast copy and expansion of boat configuration between owners (with possibility to connect with each other)
- Reference boat / test profiles
 - Premium users only can enable these profiles to be visible as comparison boats in Compare menu
